

# ABOUT

OConfirmation improves on RenVM's existing RenBTC (Bitcoin on Ethereum) infrastructure to allow near-instant asset conversions between chains. Swap your BTC for DAI, no Ether required. Stake RenBTC in OConfirmation's liquidity pool and earn returns on all transactions.

# OCONFIRMATION

# 0CONFIRMATION

A decentralized platform built on RenVM facilitating asset migration between Bitcoin and Ethereum.

## FAST

RenVM users typically wait a standard 6 Bitcoin transaction confirmations before RenBTC equivalents of their Bitcoin assets are minted on Ethereum. 0Confirmation's network of Keepers facilitates near-instant withdrawals of RenBTC to users.

## SECURE

With 0Confirmation, the risk of a failed asset conversion on RenVM is transferred from users to Keepers. To ensure liquidity and minimize risk, 0Confirmation currently supports BTC to DAI migrations between .026 and 1 BTC.

## CHEAP

In addition to RenVM's .2% fee, 0Confirmation charges only .1% on conversions. Through its Gas as a Service system, ETH gas fees are deducted from resulting RenBTC in Bitcoin conversions, allowing users to convert BTC without any Ether.

## PROFITABLE

Keepers that participate in the 0Confirmation protocol earn 40% of each RenVM fee, incentivizing participation and allowing consistent returns on provided assets.

## BTC TO DAI WITHIN SECONDS. Use your Bitcoin with DeFi.

With 0Confirmation's decentralized liquidity pool that grants assets to users, you can easily access your BTC on Ethereum with minimal delay. Gas as a Service ensures you never need to hold Ether to pay transaction fees, so you only need Bitcoin to participate in DeFi services. By contributing liquidity to the 0confirmation pool, you can earn returns on all transactions the protocol approves.
